

Barrier line – perfectly divided

The barrier line is a safety dividing line and is ideal for use in natural or bathing lakes to cordon off a swimming area, but it can also be used in indoor or outdoor swimming pools to separate leisure areas from lane swimmers. The line can also be used for jetties and floating islands. It is exceptionally robust and durable and distinguishes itself with its resilience and UV resistance.

Product information:

- Steel cable, V4A quality (7x7 mm)
- With 4 floats (70x65 mm) and 4 spacers per metre
- Larger floats, fixings and snap hooks are not included (please order these separately)

The maximum length is 50 m. Using screw mounted snap hooks it is possible to adjust the line to the desired length.

Order note:

The barrier line only includes the line with floats. Accessories like larger floats, fixings and snap hooks must be ordered separately.

Large floats for barrier lines increase buoyancy and safety

The large floats are an addition to the barrier line and provide increased buoyancy and safety for bathing lakes. As the barrier line is made to meet your specifications, please specify the number of large floats required. We recommend one every 5 m.

Product information:

- Dimensions: 300x170 mm
- Colour: orange
